Description

Find a wide range of steam eye masks from the best manufacturer. Factory outlet, quality assurance, steady delivery and factory price.

The principle of the steam eye mask is to quickly oxidize the iron powder and oxygen in the air to convert chemical energy into heat energy, and then use the generated heat to evaporate the water in the internal material and release it evenly through the advanced medical non-woven fabric. Use the warmth of steam to act on the acupoints around the eyes to promote human microcirculation, relax the tense eye muscles, and relieve eye fatigue and discomfort. After alleviating eye fatigue, people will naturally feel that their eyes are comfortable and bright, and they will feel the joy of their eyes.
