Description

In the cold weather, we stepped on the cold ground through the thin soles. The cold air passed through the soles and spread to the whole body along the feet. At the end of the day, we had no consciousness below the knees. Especially when we sit for 8 hours a day, our feet are so cold that we don't want to work. The foot is the end furthest from the blood-supplying heart. The blood flow rate is slow and the heating is insufficient. If the feet are not warm enough, it will affect the whole body, and if the feet are warm, the whole body will be warm. In the same way, once the feet are cold, the whole body will become cold, especially children and the elderly with poor resistance are very susceptible to colds. People suffering from old cold legs, rheumatoid rheumatism, etc., have a little bit of coldness in the legs and suffer from pain. Cotton shoes and cotton socks can also keep warm, but when it is below zero, your feet will still hurt and frostbite despite being heavily protected. If you are not careful, you will get frostbite and frostbite, cold and hot, and itchy. Therefore, we strongly recommend you this self-heating insole that can keep you warm, keep warm, dispel dampness and detoxify, accelerate blood circulation, transfer heat from your feet to your body, and keep your whole body warm.

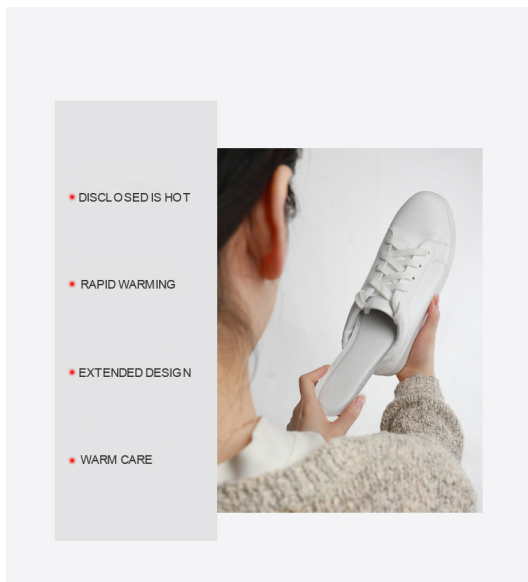

Warm your feet and keep heating up. As a professional foot warmer manufacturer, we can customize it regardless of shoe size and foot shape. You will be curious, how does it heat up? The heating principle of this heating insole is the same as that of body warmer, which is very safe and reliable. In the electrolyte solution formed by salt and water, the secondary reduced iron powder in contact with oxygen gradually oxidizes, releasing heat, and activated carbon plays a role in accelerating oxidation. Vermiculite is a unique natural mineral added to enhance heat insulation and play a better role in keeping warm. Good raw materials, good formula, can keep heating for 12 hours, warm you all day.

We can also add trace plant essential oils, ginger, mint, lavender, wormwood, etc. to the insoles, so that the feet can be treated with physical therapy while keeping warm. Plant essential oil and heating iron powder, the bottom hard paper shell, durable and not easy to deform; middle layer heating iron powder and plant essential oil treatment, cushion surface non-woven fabric, comfortable and breathable.

The professional component ratio is not only good for heat generation, but also for removing dampness and detoxification. Good raw materials provide energy for continuous heat. The temperature rises quickly after contact with air, and the average temperature is 40 degrees, which is slightly higher than the temperature of the human body, ensuring sustainable heating.

Wholesale high quality and custom package foot warmers with factory price. Quality assurance and steady delivery.
